

1. URVR is a VR file-sharing app that utilizes the 360 camera (or panorama function) on users' phones to capture more than just a snapshot. It captures entire moments, and allows users to share them with their friends, family, or other people around the world. Livestream features are also available.

Using a VR head-mounted display, recipients can step into the captured moments and live them out together. The company's marketing materials highlight experiences such as those of grandparents being able to experience a grandchild's first steps or first birthday in fully immersive 3D video.

The company's license agreement states that its users' privacy is paramount, and that therefore all of the 360-degree videos and images are deleted within 24 hours, and not stored on any servers after this period, unless the user specifies a longer window of time. As another means of ensuring users' privacy, URVR does not filter the content that users share.

- Who are the stakeholders involved in these cases?
 - What ethical issues do you spot in these scenarios? Note that some of these may be beneficial, while others are harmful/problematic.
 - Which ethical aspects are highlighted when you view the cases through the ethical lens of utilitarianism? Are there morally commendable, but not required (i.e., supererogatory) actions here? How would a utilitarian assess such actions?
2. . Suzie owns a copy of G-Whiz, a proprietary software package she purchased legitimately. The software is copyrighted , and the documentation contains a license agreement that says that the software is for use by the purchaser only. Suzie invites Luis to look at the software to see if it will fit his needs. Luis goes to Suzie's computer and she demonstrates the software to him. He says he likes what he sees, but he would like to try it in a longer test.

Extensions to the Case

So far, the actions have all been ethically sound. The next steps are where ethical responsibilities arise. Take each of the following steps as independent; that is, do not assume that any of the other steps has occurred in your analysis of one step.

- Suzie offers to copy the disk for Luis to use.
- Suzie copies the disk for Luis to use, and Luis uses it for some period of time.
- Suzie copies the disk for Luis to use; Luis uses it for some period of time and then buys a copy for himself.
- Suzie copies the disk for Luis to try out overnight, under the restriction that he must bring the disk back to her tomorrow and must not copy it for himself. Luis does so.
- Suzie copies the disk with the same restrictions, but Luis makes a copy for himself before returning it to Suzie.
- Suzie copies the disk with the same restrictions, and Luis makes a copy for himself, but he then purchases a copy.
- Suzie copies the disk with the same restrictions, but Luis does not return it.

For each of these extensions, describe who is affected, and which ethical issues are involved.
